## Review

- What kinds of statements have we seen so far?
- Assignment statements
- Input statements
- Output statements
- These are generally necessary, but not sufficient, to solve "interesting" problems

## Decision making

- Decisions are questions with answers that are either true or false (Boolean)
- e.g., Is it true that the variable 'num' is positive?
- A program can branch one way or another depending upon the answer to the question (the result of the Boolean expression).
$\mathbf{x}=$ True
$y=$ False

## Relational Operators

## Relational operators

- Allow us to compare other data types to produce booleans

| Operator | Meaning | Math. Equivalent | Example |
| :---: | :---: | :---: | :---: |
| $<$ | $<$ | Less than | $3<5$ |
| $>$ | $>$ | Greater than | $5>3$ |
| $==$ | $=$ | Equal to | $3==3$ |
| $<=$ | $\leq$ | Less than or equal to | $5<=5$ |
| $>=$ | $\geq$ | Greater than or equal to | $5>=4$ |
| $!=$ | $\neq$ | Not equal to | $5!=3$ |

## Boolean expression

## (operand) relational operator (operand)

- The result of the relational operator (comparison) is of type bool (short for boolean)
- Boolean: a binary variable, having two possible values: "True" and "False"
- True $\rightarrow 1$ or T and False $\rightarrow 0$ or F

$$
\begin{aligned}
& x=1.0 \\
& y=2.0 \\
& c=(x<=y) \\
& \text { print (type(c) }) \longrightarrow \text { class 'bool'> }
\end{aligned}
$$

## Boolean Operators

## Logical (Boolean) operators

- For bool variables $\mathbf{a}$ and $\mathbf{b}$
- $\mathbf{a}$ and b (True only when $\mathbf{a}$ and $\mathbf{b}$ are both True)
- $\mathbf{a}$ or $\mathbf{b}$ (False only when $\mathbf{a}$ and $\mathbf{b}$ are both False)
- not a (True only when a is False and vice versa)

## Precendence

With relational and boolean operators

## Update on precedence

| Order | Operations | Precedence |  |
| :---: | :--- | :--- | :--- |
| 1 | () |  | Highest |
| 2 | $x^{* *} y$ |  |  |
| 3 | $-x, \quad+x$ |  |  |
| 4 | $x^{*} y, \quad x / y, \quad x \% y, \quad x / / y$ |  |  |
| 5 | $x+y, \quad x-y \quad$ |  |  |
| 6 | $<, \quad<=, \quad>$ |  |  |
| 7 | $!=, \quad==$ |  |  |
| 8 | not |  |  |
| 9 | and |  |  |
| 10 | or |  |  |
| 11 | $=$ |  | Lowest |

## Truth Tables

## Truth Table for OR

## Truth Table for OR

| A | B | A or B |
| :---: | :---: | :---: |
| T | T | T |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |

## Truth Table for OR

| A | B | A or B |
| :---: | :---: | :---: |
| T | T | T |
| T | F | T |
|  |  |  |
|  |  |  |

## Truth Table for OR

| A | B | A or B |
| :---: | :---: | :---: |
| T | T | T |
| T | F | T |
| F | T | T |
|  |  |  |

## Truth Table for OR

| A | B | A or B |
| :---: | :---: | :---: |
| T | T | T |
| T | F | T |
| F | T | T |
| F | F | F |

## Logical expression

(boolean expression) logical operator (boolean expression)

- Logical operators $\rightarrow$ and, or, and not (more later)

| A | B | A or B |
| :---: | :---: | :---: |
| T | T | T |
| T | F | T |
| F | T | T |
| F | F | F |

| A | B | A and B |
| :---: | :---: | :---: |
| T | T | T |
| T | F | F |
| F | T | F |
| F | F | F |

| B | not B |
| :---: | :---: |
| T | F |
| F | T |

## Truth Tables

## Example

## Boolean Logic

- Example:
- Construct a truth table for $A$ and (B or not C):

## Boolean Logic

- Example:
- Construct a truth table for $A$ and (B or not C):

| A | B | C |
| :--- | :--- | :--- |
| 0 | 0 | 0 |
| 0 | 0 | 1 |
| 0 | 1 | 0 |
| 0 | 1 | 1 |
| 1 | 0 | 0 |
| 1 | 0 | 1 |
| 1 | 1 | 0 |
| 1 | 1 | 1 |

## Boolean Logic

- Example:
- Construct a truth table for A and (B or not C):

| $A$ | $B$ | $C$ | not $\mathbf{C}$ |
| :---: | :---: | :---: | :---: |
| 0 | 0 | 0 | 1 |
| 0 | 0 | 1 | 0 |
| 0 | 1 | 0 | 1 |
| 0 | 1 | 1 | 0 |
| 1 | 0 | 0 | 1 |
| 1 | 0 | 1 | 0 |
| 1 | 1 | 0 | 1 |
| 1 | 1 | 1 | 0 |

## Boolean Logic

- Example:
- Construct a truth table for A and (B or not C):

| A | B | C | not C | B or not C |
| :---: | :---: | :---: | :---: | :---: |
| 0 | 0 | 0 | 1 | 1 |
| 0 | 0 | 1 | 0 | 0 |
| 0 | 1 | 0 | 1 | 1 |
| 0 | 1 | 1 | 0 | 1 |
| 1 | 0 | 0 | 1 | 1 |
| 1 | 0 | 1 | 0 | 0 |
| 1 | 1 | 0 | 1 | 1 |
| 1 | 1 | 1 | 0 | 1 |

## Boolean Logic

- Example:
- Construct a truth table for A and (B or not C )

| A | B | C | not C | B or not C | A and (B or not C) |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 0 | 0 | 1 | 1 | 0 |
| 0 | 0 | 1 | 0 | 0 | 0 |
| 0 | 1 | 0 | 1 | 1 | 0 |
| 0 | 1 | 1 | 0 | 1 | 0 |
| 1 | 0 | 0 | 1 | 1 | 1 |
| 1 | 0 | 1 | 0 | 0 | 0 |
| 1 | 1 | 0 | 1 | 1 | 1 |
| 1 | 1 | 1 | 0 | 1 | 1 |

## Onward to ... if else statements.
