

## Practice Problem for Writing Use Cases

Consider the use case diagram for a proposed Course Registration System given in Fig. 1, where an administrator can either offer a class or remove a class, and a student can either add a class or drop a class. Your task is to write the use case *Drop a class* which should describe how a student will drop a class in the Course Registration System. For guidelines, think of how you drop a class from the *Student Center* after logging into the *MyUofC Portal*.
