

# Introduction

Peeking into Computer Science

© Jalal Kawash 2010

1

- Mandatory: Chapter 1
- Optional: None

## Reading Assignment

*Peeking into Computer Science*

© Jalal Kawash 2010

2

At the end of this section, the student will be able to:

1. Name the 5 basic components of a computer & identify their functions
2. Explain how processor speed is measured
3. Understand Dual-Core architectures
4. Describe the operation of Hard disks and optical CDs
5. Describe the memory hierarchy
6. Understand how information is represented in a computer by 0s and 1s

## Objectives

Peeking into Computer Science

© Jalal Kawash 2010

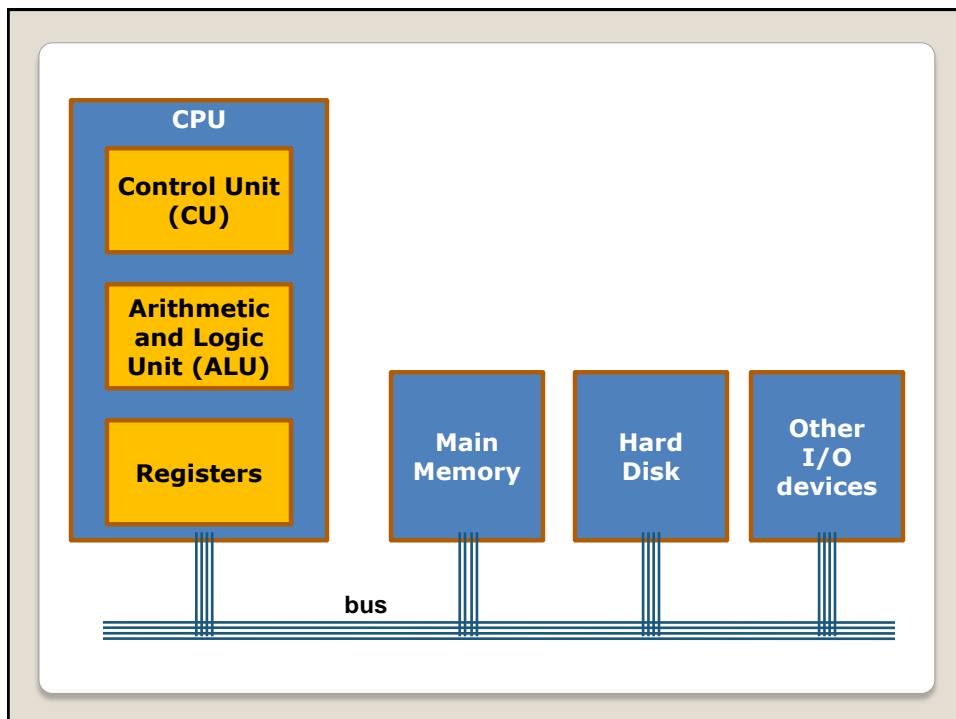

- Computers are general purpose machines
  - Music/Movies
  - Communication
  - More complex operation

## Computers

Peeking into Computer Science

© Jalal Kawash 2010

5

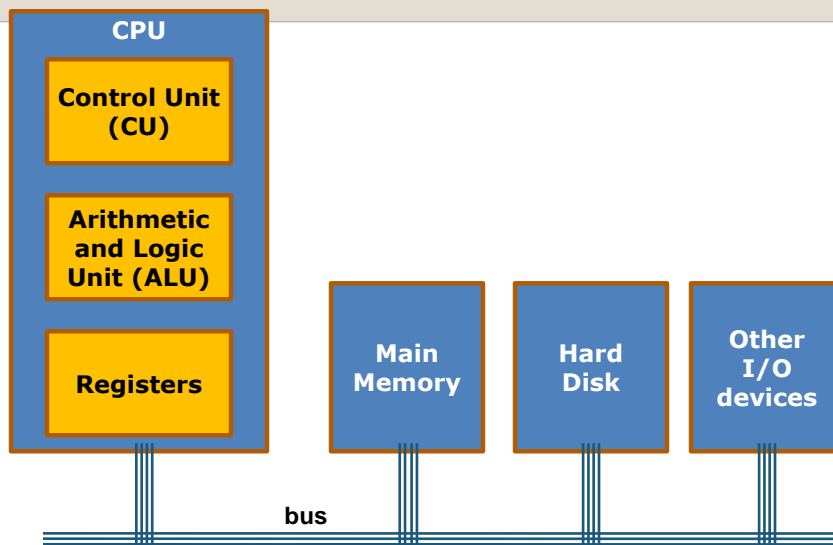

- CPU is the brain of the computer
- Also called processor
- Has two components:
  - Arithmetic and Logic Unit (ALU)
    - Simple arithmetic and logic operations
  - Control Unit
    - Controls the operations of the rest of the machine
- Has a scratch pad
  - Collection of registers
- Connected to the rest of the system components

## Central Processing Unit

Peeking into Computer Science

© Jalal Kawash 2010

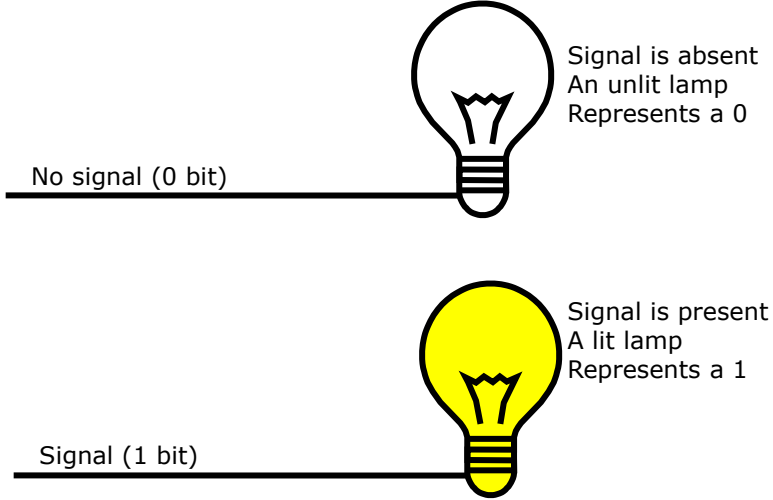

## The Bus

Peeking into Computer Science

© Jalal Kawash 2010

8

No signal (0 bit)

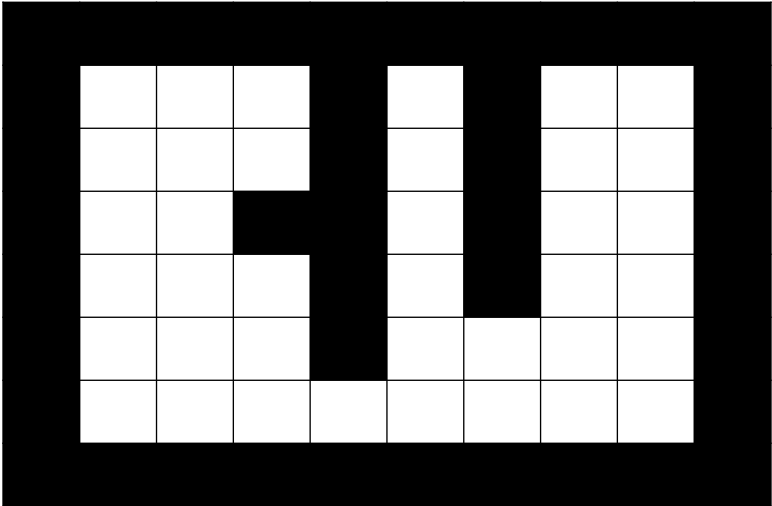

Signal is absent  
An unlit lamp  
Represents a 0

Signal (1 bit)

Signal is present  
A lit lamp  
Represents a 1

 **Signals**

 **Robot's World**

*Peeking into Computer Science* © Jalal Kawash 2010 10

1	1	1	1	1	1	1	1	1	1
1	0	0	0	1	0	1	0	0	1
1	0	0	0	1	0	1	0	0	1
1	0	0	1	1	0	1	0	0	1
1	0	0	0	1	0	1	0	0	1
1	0	0	0	1	0	0	0	0	1
1	0	0	0	0	0	0	0	0	1
1	1	1	1	1	1	1	1	1	1

## Robot's World

Peeking into Computer Science

© Jalal Kawash 2010

11

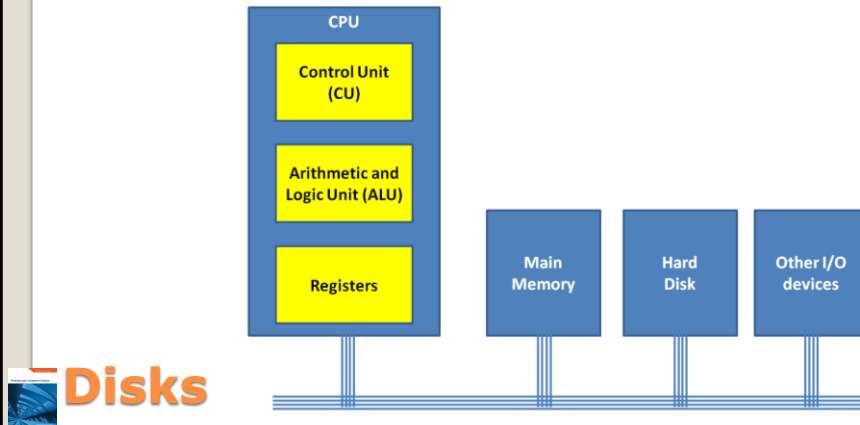

- Random Access Memory
- Holds programs and Data for CPU
- Every thing the CPU operates on (executing a program, playing a song, working on a file) must be in RAM
- Volatile: do not hold data if power is lost
- Need non-volatile storage

## Main Memory

Peeking into Computer Science

© Jalal Kawash 2010

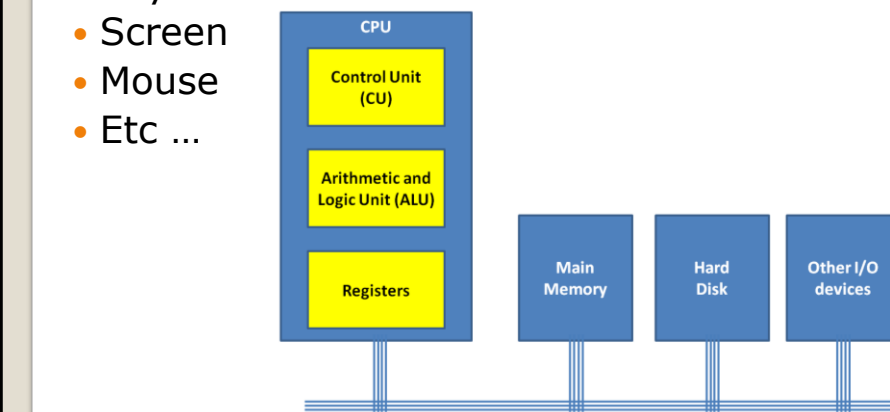

- Non-volatile Storage
- Electro-magnetic signals that stay in the absence of power

Peeking into Computer Science

© Jalal Kawash 2010

- Printer
- Keyboard
- Screen
- Mouse
- Etc ...

Peeking into Computer Science

© Jalal Kawash 2010

- Fast Memory that sits between main memory and CPU

## Cache Memory

Peeking into Computer Science

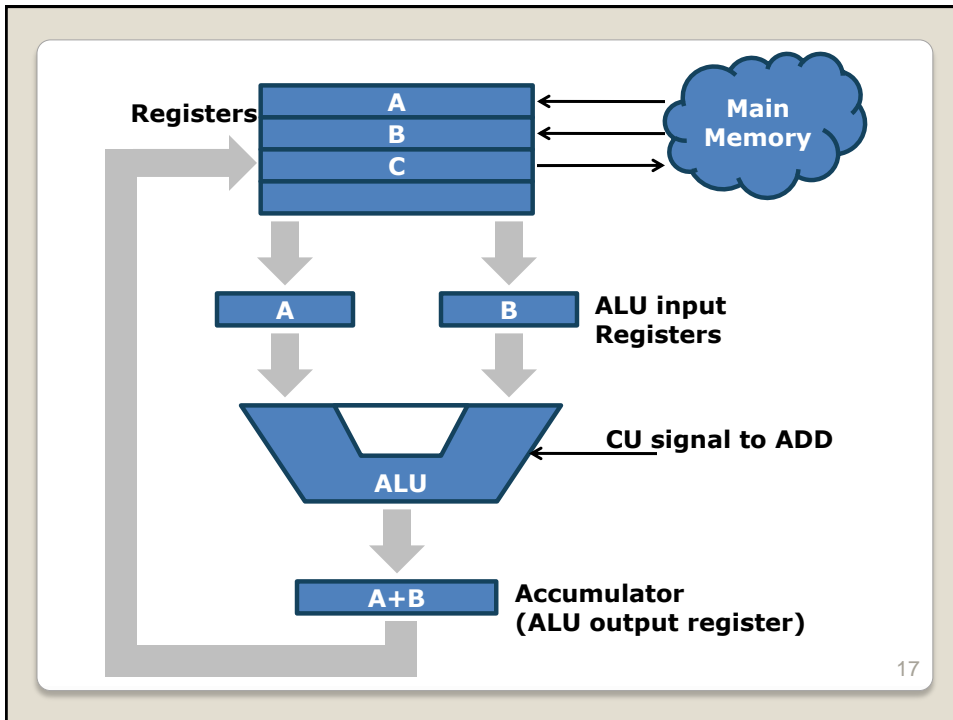

© Jalal Kawash 2010

## CPU Operation

Peeking into Computer Science

© Jalal Kawash 2010

- What does a **3.0 GHz CPU** mean?
- CPU can perform about 3 billion micro-instructions per second

## Talking Gigahertz

Peeking into Computer Science

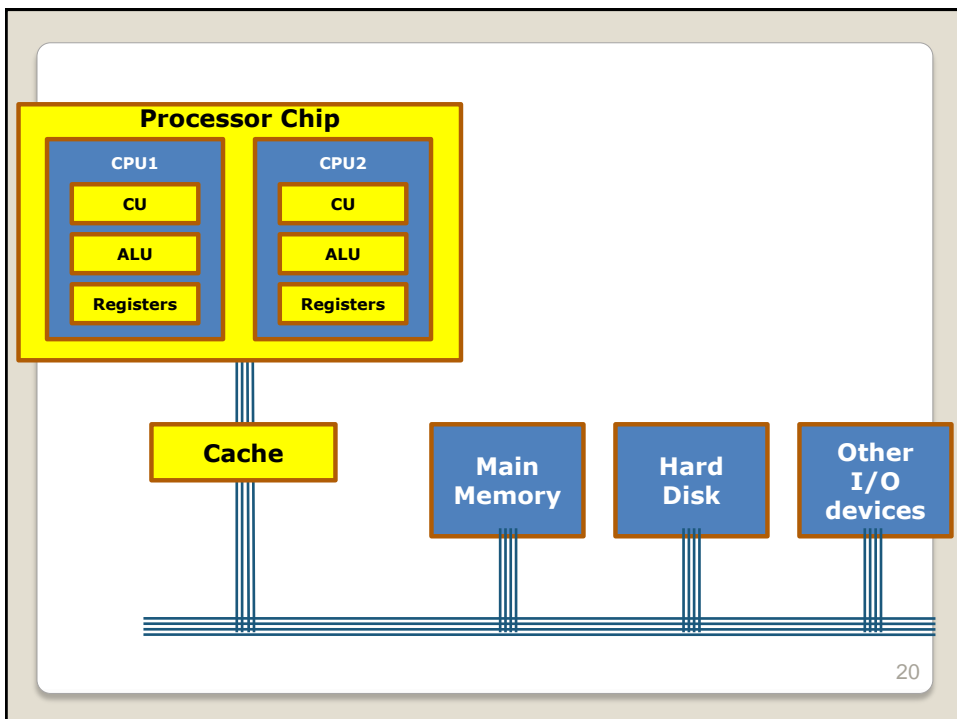

© Jalal Kawash 2010

- A Computer that contains two CPUs on the same chip

## Dual Core?

Peeking into Computer Science

© Jalal Kawash 2010

- Byte = 8 bits
- Kilobyte = 1024 bytes
- Megabyte = 1024 Kilobytes
  - 1,048,576 bytes
- Gigabyte = 1024 Megabytes
  - 1,073,741,824 bytes
- Terabyte = 1024 Gigabyte
  - 1,099,511,627,776 bytes

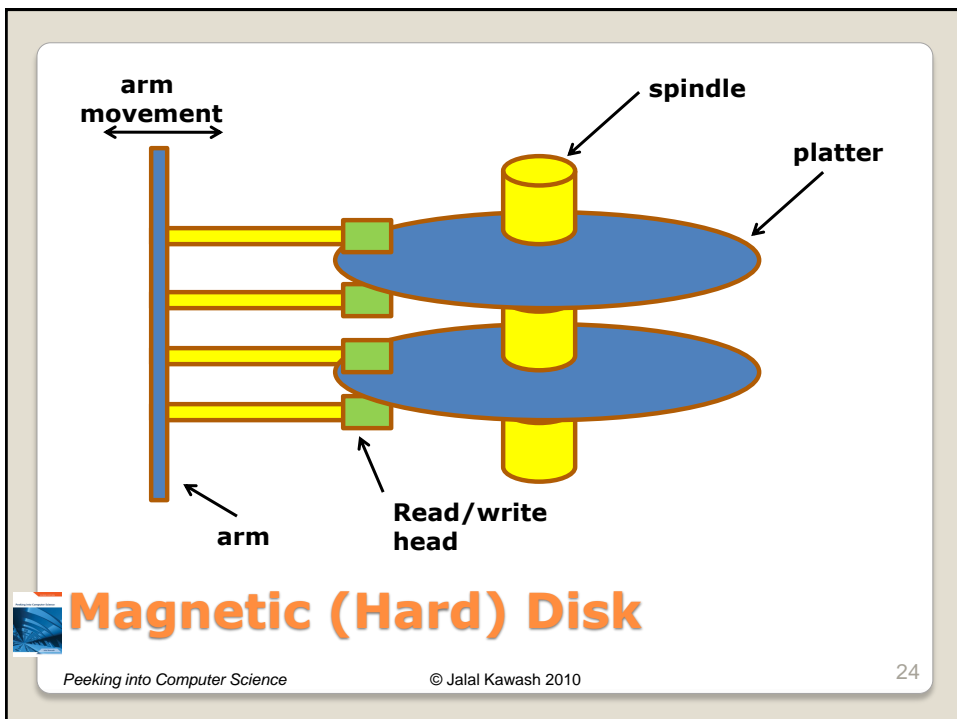

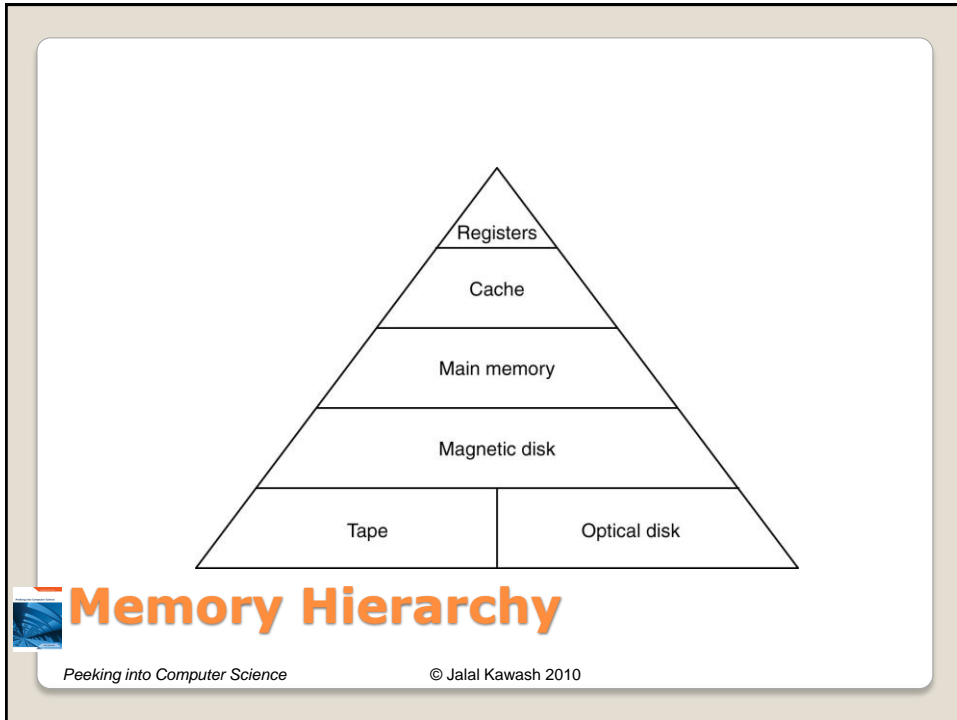

## Storage Units

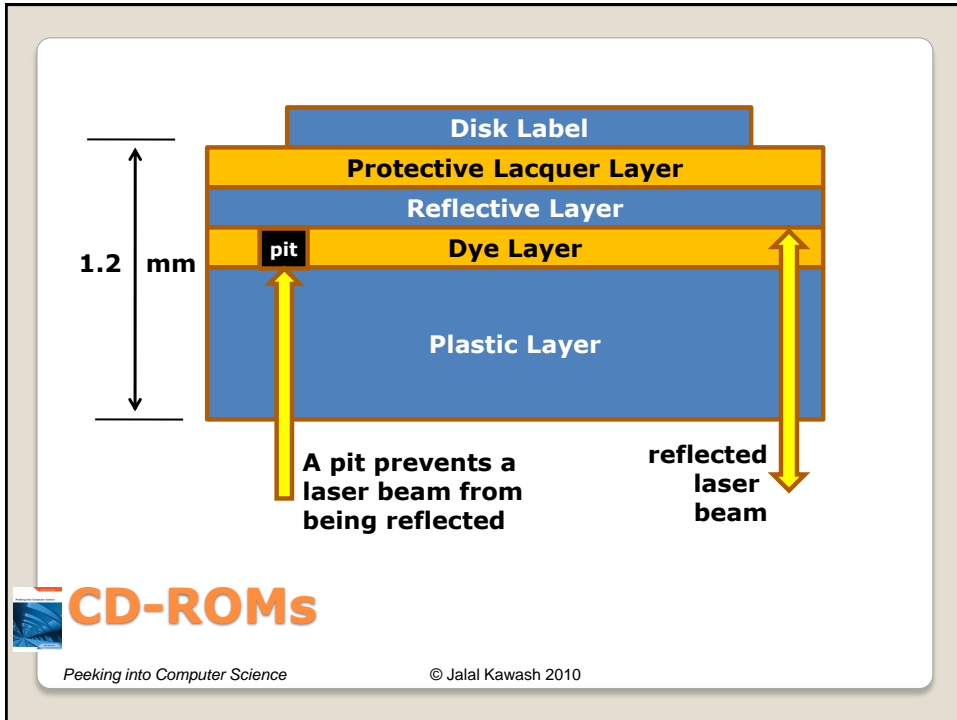

*Peeking into Computer Science*

© Jalal Kawash 2010

22

At the end of this section, the student will be able to:

1. Understand how characters are represented by 0s and 1s
2. Understand the encoding and decoding process
3. Find the minimum number of bits needed to code character information

## Objectives

*Peeking into Computer Science*

© Jalal Kawash 2010

- Symbols in a computer's memory are stored as 0s and 1s
- Each symbol is given a fixed-length code
- ASCII codes:
  - A is 0100 0001
  - B is 0100 0010
  - C is 0100 0011
  - D is 0100 0100
  - E is 0100 0101
  - Etc..

## Fixed-Length Codes

*Peeking into Computer Science*

© Jalal Kawash 2010

28

- The Word ACE is stored in a computer as:

010000010100001101000101  
 A C E

## Fixed-Length Codes

Dec	Hx	Oct	Char	Dec	Hx	Oct	Html	Chr	Dec	Hx	Oct	Html	Chr	Dec	Hx	Oct	Html	Chr
0	0	000	<b>NUL</b> (null)	32	20	040	#32;	Space	64	40	100	#64;	@	96	60	140	#96;	`

## More ASCII Codes

- If the alphabet has two letters only (say 0 and 1), how many **one-letter words** can be formed?
- Only two possibilities exist
  - 0
  - 1
- So, two words

## A Counting Problem

Peeking into Computer Science

© Jalal Kawash 2010

31

- Think of it this way:
- We have a box that can fit one ball only
- Balls have one of two colors

- How many distinct boxes can we produce?

## A Counting Problem

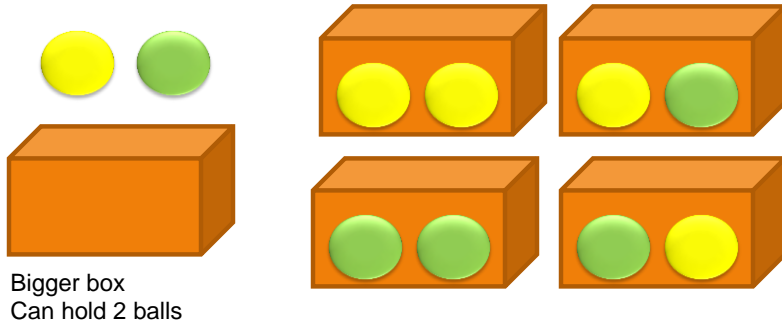

Peeking into Computer Science

© Jalal Kawash 2010

32

- If the alphabet has two letters only (say 0 and 1), how many **two-letter words** can be formed?

## A Counting Problem

Peeking into Computer Science

© Jalal Kawash 2010

33

- If the alphabet has two letters only (say 0 and 1), how many **two-letter words** can be formed?
- 00
- 01
- 10
- 11
- So, four words

## A Counting Problem

Peeking into Computer Science

© Jalal Kawash 2010

34

- If the alphabet has two letters only (say 0 and 1), how many **three-letter words** can be formed?
- 000, 001, 010, 011, 100, 101, 110, 111
- So, eight words

## A Counting Problem

Peeking into Computer Science

© Jalal Kawash 2010

35

- If the alphabet has two letters only (say 0 and 1), how many  **$n$ -letter words** can be formed?
- $2^n$  words

## A Counting Problem

Peeking into Computer Science

© Jalal Kawash 2010

36

- If the alphabet has  $\beta$  letters, how many ***n*-letter words** can be formed?

- $\beta^n$  words

## A Counting Problem

Peeking into Computer Science

© Jalal Kawash 2010

37

- Assume we have a file that contains data composed of 6 letters (symbols) only:
- A, I, C, D, E, and S (for space)

```
ACE DICE AIDE CAID
EAD DAICED ...
```

## Back to Coding

Peeking into Computer Science

© Jalal Kawash 2010

38

- Assume we have a file that contains data composed of 6 letters (symbols) only:
- A, I, C, D, E, and S (for space)

```
ACESDICESAIDESCAID  
EADSDAICED ...
```

## Back to Coding

Peeking into Computer Science

© Jalal Kawash 2010

39

- If the file has 1000 characters, how many bits (0s and 1s) are needed to code the file?

## Coding

Peeking into Computer Science

© Jalal Kawash 2010

40

- The first question is
- How many symbols do we need to represent each character?
- The objective is to keep the size of the file as small as possible
- We have 6 characters (messages) and two alphabet symbols (0 and 1)
- 2 is not enough, since  $2^2$  is 4

## Coding

Peeking into Computer Science

© Jalal Kawash 2010

41

- 00 for A
- 01 for S
- 10 for I
- 11 for E
  
- We cannot represent the rest C and D
  
- 3 works, since  $2^3$  is 8, so we can represent up to 8 characters and we only have 6

## 2 bits are not enough

Peeking into Computer Science

© Jalal Kawash 2010

42

- Say
- 000 for A
- 001 for S
- 010 for I
- 011 for E
- 100 for C
- 101 for D
- 110 not used
- 111 not used

**3 bits are more than enough**

- If the file has 1000 characters, how many bits (0s and 1s) are needed to code the file?
- Each character needs 3 bits
- Hence, we need  $3 \times 1000 = 3000$  bits

**Coding**
