You can find multiple choice review questions in D2L under: `Assessments->Quizzes`

For all questions, unless otherwise specified assume that there are no syntax errors in any programs or program fragments.

Non-multiple choice questions

Short answer 2 (code writing question):

Implement the body of this function so it will create and return a copy of the original list. A copy is needed so edits can be made on the copy and original information remains.

```python
def makeCopy(theOriginal):
    """
    Your answer goes here.
    """

def start():
    original = ["Lay Sui Lung, 32",
                "James T. Kirk, 37",
                "Heather Morris, 17"]
    aCopy = makeCopy(original)

start()
```
