

Exercise 3:

- **Starting program:** `tax_version1.py` (i.e. the solution to Exercise1)
- Modify the previous program so that there is subsidy of \$100 when total income is not positive (this is the tax owed because it's a "negative tax" or taxes in reverse where the government gives you money).
- A named constant should be declared (and used) for the subsidy.
- **Solution:** `tax_version2.py`
